

Supply Chain Solutions

Cold Chain Monitoring

- ✓ Wide temperature ranges
- ✓ Choose who gets what data and when
- ✓ Designed to meet your requirements

Introduction

Comprehensive selection of innovative and cost effective temperature monitoring solutions delivering critical time - temperature data when and where it is needed!

Temperature sensitive products are shipped over a wide range of temperatures, our offerings are capable of withstanding or measuring any temperature range that your shipments encounter. Cryogenics to -80° to Frozen • Chilled • Ambient

Automation

Remove the human element of configuration. Use innovative battery powered sensors use Geofencing and light sensors to start recording, automatically distribute critical information enroute and generate reports on arrival.

Solutions to suit your needs

Understanding the commercial, technical and operational requirements of your supply chain monitoring will enable us to assist in selecting the ideal solution from our range of industry standard solutions.

- ✓ Operate in a range of temperatures
- ✓ Supply-chain data automation
- ✓ Cloud based monitoring

Why is our solution the perfect fit?

1

Real-time cloud

Cloud based software can deliver notifications on the integrity, location and thermal profiles collected in your global multi-sensor network - critical to verifying product safety and on time deliveries.

2

Warning configuration

Configurable trigger events dispatch warnings before a problem is going to occur, when corrective actions are not viable both the shipper and recipient can be made aware of an issue before the time temperature sensitive product arrives.

3

Monitor at a glance

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Quisque ut quam enim. Suspendisse interdum varius tellus quis rhoncus. Sed non lectus ornare ex aliquet porttitor et quis turpis.

4

Comprehensive data at your fingertips

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Quisque ut quam enim. Suspendisse interdum varius tellus quis rhoncus. Sed non lectus ornare ex aliquet porttitor et quis turpis.

Data logger options

A wide range of options to suit your supply chain needs - from single and multiple use data loggers to simple 'stick on' indicators and cloud based real-time systems

Single use operation

Convenient, single use dataloggers are preconfigured 'out the box' and ready for rapid deployment at the press of a button.

Multi use operation

Reusable solution to minimise cost per shipment. Supplied with software to enable reconfiguration and redeployment.

Data Integration

Stream data into existing supply chain management, quality management and ERP systems.

Concise, easy and rapid reporting...

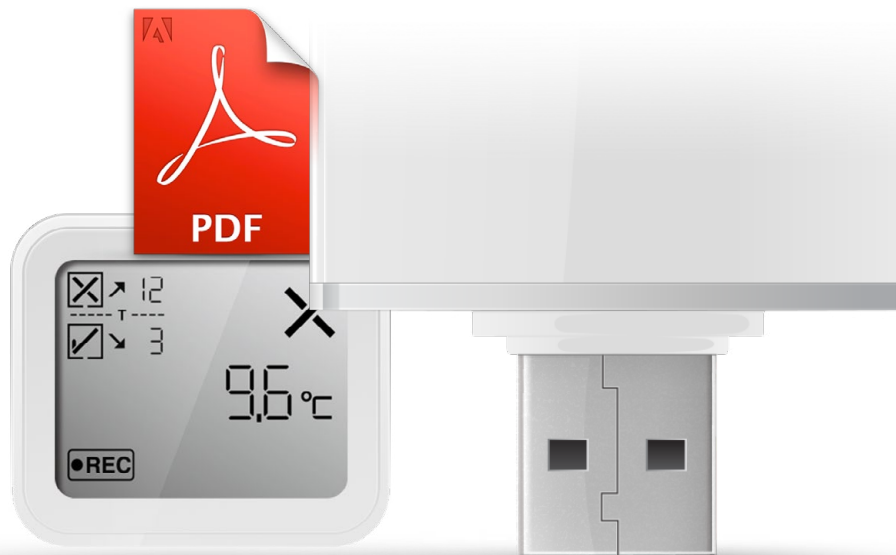

Solutions that deliver reports without the need for bespoke interface, software installation or even a computer!

DirectUSB - Integral USB connection enables the data logger to be directly plugged into a computer

PDF Reporting - Generate reports without installing software, including out of limit temperature events

On delivery visual Indication -

At a glance indication of in or out of range temperatures results

A solution for any application

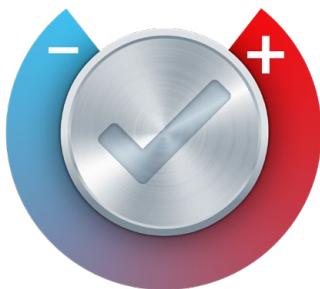

Choose who sees what

A comprehensive and detailed report is not always relevant to everyone involved in the supply chain. Quality and validation departments will be interested in the robustness of the distribution network rendering regular time stamped temperature data a valuable commodity but a receiver of goods is more likely to require a clear indication that the shipment was in or out of limits. Our solutions deliver information to the appropriate people at the right time.

Time temperature indicators

Provide a simple verification that time temperatures sensitive products have been shipped within acceptable limits. Operating TTI requires no expert knowledge and rapidly identify when problems have occurred. Chemical time temperature indicators provide the best value for money and electronic deliver the complete story

Operate in a range of temperatures

The Temperature sensitive products are shipped over a wide range of temperatures, our offerings are capable of withstanding or measuring any temperature range that your shipments encounter.

Why choose us?

We have tailored our hardware and services to deliver customers a comprehensive solution to all supply chain monitoring, qualification and validation demands imposed on them by governing bodies and their auditors.

✓ Over 30 years of experience

ISO9001 accredited, delivering quality hardware and services since 1979.

✓ Package options

We will adhere to your application and operational requirements and put forward solutions packaged with software, documentation and custom cases.

✓ FDA Compliant

Comprehensive documentation and software packages which can be validated on-site by our experienced engineers.

✓ Training

On-site and off-site training courses ensure staff are knowledgeable in the capabilities

✓ Calibration certificates

On-site and off-site calibration services ensure your hardware is operating within acceptable limits and supported with documentation to appease inspectors.

✓ Comprehensive software

Offline and online configuration and analysis software with comprehensive reporting features.

Contact details

We welcome all inquiries, so please call or email details through and we will get back to you with a solution.
